

GLYMET DAIRY

The new organic minerals source

- ✓ Smallest molecular weight among organic minerals
- ✓ Highest mineral content per chelate unit
- ✓ More savings per ton of feed supplemented

GLYMET DAIRY

The new glycinate form of organic minerals

GLYMET DAIRY is an organic complex based on glycine (amino acid) & minerals

GLYMET DAIRY vs. other organic available sources:

	Proteinate	AA-based chelate	GLYMET DAIRY
Molecular weight	< 1500 daltons	< 400 daltons	< 300 daltons
Stability	++	+++	+++
Ligand agent	Soybean protein (multiple AA chain)	Specific AA (methionine)	Specific AA = Glycine
Solubility	High	Very high	Very high
Absorption	+++	+++++	+++++
Bioavailability	+++	+++++	+++++
Mineral content (%)	10 %	15 %	19 - 22 %
Authorized in	EU & USA	USA	EU & USA

Why you should use GLYMET DAIRY in your animal feed?

- ✓ Thanks to its small molecular weight (300 daltons) no carrier is needed for absorption. Rapid adsorption rate.
- ✓ Strong covalent bonds guarantee its stability at low pH (stomach), preventing mineral interaction and insoluble salt formation.
- ✓ Less vitamin oxidation in premixes due to its high stability.
- ✓ Totally available → reduces environmental impact.
- ✓ Reduces animal stress.
- ✓ Improves animal immune system → decreases risk of disease.
- ✓ Optimize reproductive & performance parameters

Composition of GLYMET DAIRY Each kg Contains:	
- Zinc (hydrated zinc glycinate)	56.00 gm
- Manganese (hydrated manganese glycinate)	28.60 gm
- Copper (hydrated copper glycinate)	20.00 gm
- Cobalt (hydrated cobalt glycinate)	02.00 gm
- Carrier	q.s

SUGGESTED DOSAGE:

7gm per head per day or 1 kg/MT or as recommended by the nutritionist.
